DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Fortin (Telephone # 613-768-3035) on January 17, 2006.

Abstract: Delete Abstract and replace with following new abstract;

"A method and a network for a universal transfer mode (UTM) of transferring data packets at a regulated rate are disclosed. The method defines a protocol that uses an adaptive packet header simplify packet routing and increase transfer speed. The protocol supports a plurality of data formats, such as PCM voice data, IP packets, ATM cells, frame relay and the like. The network preferably includes plurality of modules that provide interfaces to various data sources. The modules are interconnected by an optic core with adequate inter-module links with preferably no more than two hops being required between any origination/destination pair of modules. The adaptive packet header is used for both signaling and payload transfer."

Delete Claim 2.

Claim 1, replace "A protocol" in line 1 with "A method and a network for a universal transfer mode (UTM)". In line 9, after the word "network"

"transferring payload data packets as connectionless packet traffic wherein the adaptive header is used to distinguish a connectionless payload packet from a connection-based payload packet;

transferring payload data packets as connection- based data packet traffic wherein the adaptive header identifies a connection through which the payload data packets are transferred;

managing connectionless payload data packet traffic to ensure committed quality of service wherein the adaptive header identifies a quality of service associated with each connectionless payload data packet and the quality of service specifies at least an order in which the connectionless data packets are served during transfer through the data network;

establishing any of a path, a connection within a path, or an independent connection using the adaptive header as a control packet; modifying the allocated bit rate of any of a path, a connection within a path, or an independent connection using the adaptive header as a control packet;

and deleting any of a path, a connection within a path, or an independent connection using the adaptive header as a control packet." Has been added.

Claim 3 replace "A protocol" in 10 with "UTM".

Claim 3 replace "protocol" in line 11 with "UTM".

Claim 4 replace "A protocol" in line 22 with, "UTM".

Claim 5 replace "A protocol" in line 28 with "UTM".

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claim 1, is allowed.

The prior art discloses a method and system for data packet transfer with an header and data portions within a packet format with destination and source addresses and transferring payload for connection and connectionless based networks.

The prior art however fails to disclose or fairly suggest an adaptive header within a universal transfer mode or UTM, wherein the adaptive header distinguishes a connectionless payload packet from a connection based payload packet and further

managing the connectionless payload packet to ensure committed quality of service (QoS) that an adaptive header identifies for each connectionless payload packet.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
